No dust & No moisture acceptable inside

BREEZAIR INSTALLED IN SEIMENS DATA CENTRE, CHESHIRE, UK

Breezair is the ONLY Evaporative System in the world, approved according to **ASHRAE USA's** International Standards for Data Centres & Server Rooms.

Data Centres and Server Rooms are one of the most challenging environments to control, given the business-critical consequences of a system failure, due to unpredictable temperature, hot spots, and overheating of the vital equipment housed within these increasingly business integral environments.

Only Breezair system provides fresh, conditioned, moisture-free air to maintain conditions in this critical environment. The 25KW cooling demand is met from a single Breezair cooling unit consuming less than 400 Watts of electricity.

The Breezair system is fully monitored, ensuring air is delivered to the servers within the latest ASHRAE guidelines for server Rooms and Data Centre; AND with a savings of up to 90%. Our award winning system meets the unique requirements of data centres and computer rooms.

Breezair
NUMBER ONE IN NATURAL COOLING
